

Review all of your critical carrier data at a glance.

# Rapid Carrier Selection

Cirrus TMS lets you quickly review and update carrier data so you can choose the most accurate rate and service.

Designed to eliminate repetitive data entry, Cirrus TMS efficiently manages the carrier data management and selection processes. Input carrier details online, import data directly into your system or set up a secure web portal where carriers can self-manage their data. Once your information is stored, you can access it during the quote process so you simultaneously obtain real time pricing and transit times from multiple carriers.

### Carrier Management

Maintain carrier data, rates, service areas, equipment and restrictions, and audit your carriers based on current insurance coverage, safety, damage rates, hazmat endorsements and more

### Automate Updates

Update carrier data via web browser, import data using XML documents or allow carriers to edit their own information through a secure interface

### Procurement

Post bid requests to public load boards so you can get quotes from certified trucking companies online just like you would for common carriers

### Rapid Selection

View rates and bids side by side so you can choose only carriers that meet specific criteria for each shipment, as well as electronically tender loads, schedule appointments and track delivery

### Optimization

Once you are able to compare carriers and historical shipments, you will be able execute optimized results and reduce your overall transportation spend

### Performance Reporting

Run reports and view graphic charts to quickly analyze each carrier's ratio of quotes to shipments and identify active versus non-active carriers

- ✓ Get LTL rates via EDI or API and post to load boards to get truckload bids
- ✓ Quickly add and update carrier information
- ✓ Consolidate LTL shipments for lower pricing
- ✓ Review and export reports based on performance and historical shipments
- ✓ Monitor carrier compliance for insurance coverage and operating authority
- ✓ Optimize shipments by consolidating between multiple modes
